

Chukrasia tabularis

Kingdom: Plantae

Clade: Angiosperms

Order: Sapindales

Family: Meliaceae

Genus: *Chukrasia*

Species: *C. tabularis*

Chukrasia tabularis also known as the Common Chakrasia or Indian Mahogany, is a large tree native to tropical Asia.

Height:

The *Chukrasia tabularis* tree typically grows to a height of 20 to 30 meters.

Uses:

- **Quality Wood:** The wood of *Chukrasia tabularis* is prized for its strength and durability. It is commonly used in making high-quality furniture, cabinetry, and for construction purposes due to its fine grain and ability to be polished.
- **Traditional Uses:** In traditional medicine, various parts of the tree, such as the bark and leaves, are utilized for their potential health benefits. It is believed to have properties that may help treat different ailments, although scientific research on these uses is limited.
- **Shade Tree:** The tree is often planted in urban environments and parks for its large canopy, which provides shade and contributes to urban green spaces.

Religious Importance:

- *Chukrasia tabularis* does not have specific religious significance in Hinduism, but its impressive size and presence may make it a notable feature in ceremonial or sacred landscapes.
- The tree's grandeur and high-quality wood can symbolize strength, stability, and longevity in various cultural contexts.
