

7.1.2: The Institution has facilities and initiatives

Disabled-friendly, barrier free environment

Built environment with ramps/lifts for easy access to classrooms.

Buildings on the college campus were built with ramps in mind, as this is crucial for ensuring that those with mobility issues may easily access classes and other amenities. Including ramps in the physical environment encourages diversity, ensuring that all students have equal access to education, and removes barriers on campuses for people who have mobility issues. To establish an environment that meets the varied requirements of the campus community, it is crucial to comply with accessibility rules and laws.

RAMP ACCESSIBILITY FOR PARKING IN THE COLLEGE

WALKING-FRIENDLY ROUTES

In our institution, the walkways were made to be wide enough to comfortably fit pedestrians. Make sure they are wherever feasible isolated from motor traffic, well-lit, and well marked. In order to survive weather conditions and create a safe walking surface, construction materials that are robust and non-slip were employed. Accessible routes are available for people with disabilities as well. Include curb cuts, tactile paving, and ramps to facilitate wheelchair users and anyone who have mobility issues. Observe accessibility standards to create a welcoming environment for all campus visitors.

Ramp for Classrooms
